VIGÍA

Conventional monitoring measures how much there is.
VIGÍA tells you where it comes from and what information it carries.

The Deal

VIGÍA

Sample collection

Bacteria identification

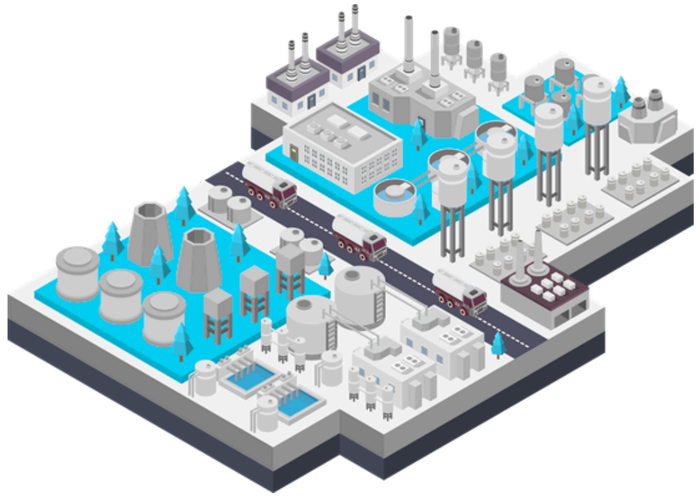

DNA identification

Data analysis

VIGÍA REPORT

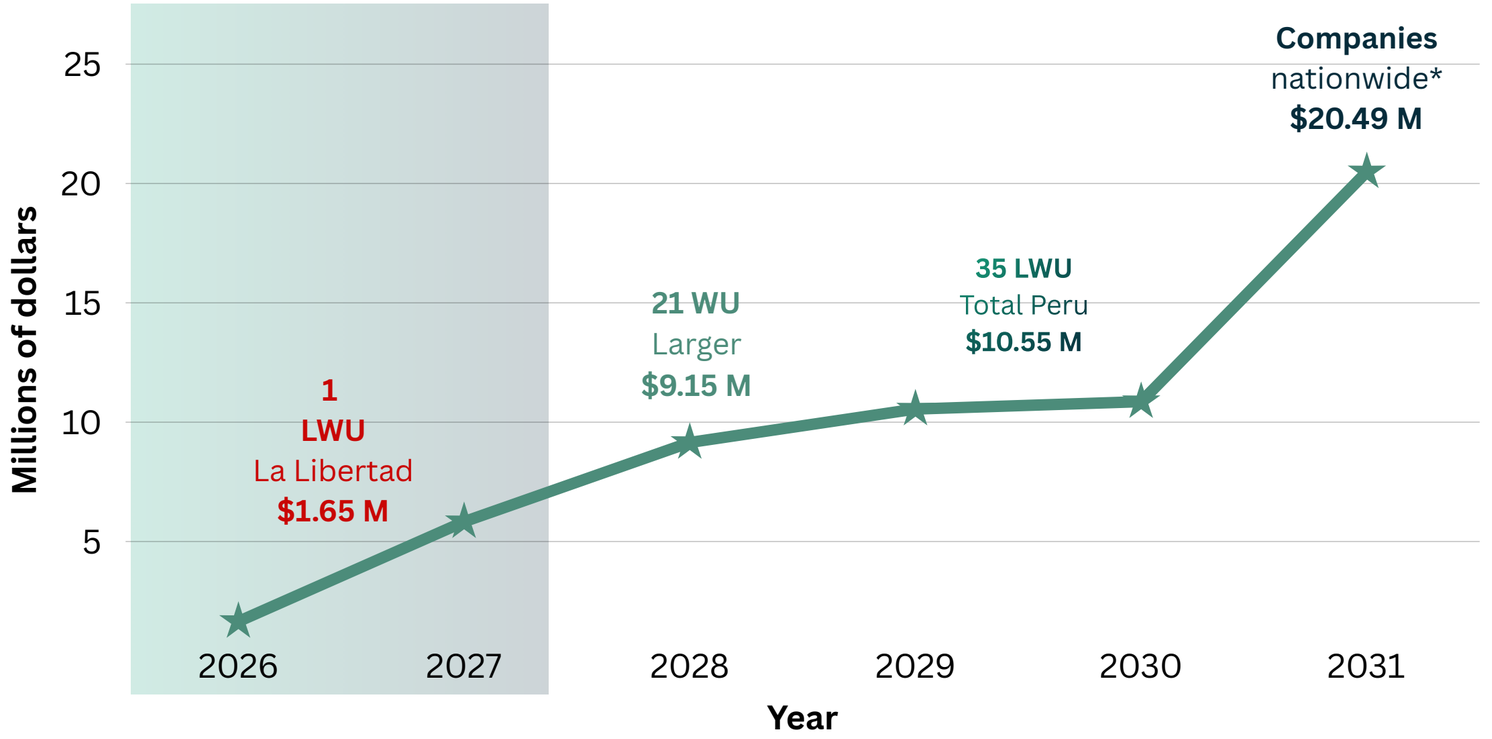

$600 / sampling point

COMPANIES RESPONSIBLE FOR WATER TREATMENT AND PROCESSING

Market

COMPANIES RESPONSIBLE FOR WATER TREATMENT AND PROCESSING

LWU = Large Water Utility

* Private water treatment plants, agro-export companies, aquaculture companies, healthcare facilities

Source: Sunass

gob.pe

Peru invests **$4.03 million per year** in disaster risk management and **$5.48 million** in water-source conservation.

Customer value

Sampling efficiency

↓ 30%

Fewer exploratory sampling points

Source attribution

≥90%

source-classification accuracy target

Risk information

>1%

Indicator groups: total + fecal coliforms

100%

100% microbial and molecular profiling

Current workflow

- Routine monitoring
- Threshold exceeded / anomaly detected
- Additional sampling
- Laboratory analysis
- Identify affected area
- Additional sampling
- Investigate source
- Corrective action

VIGÍA

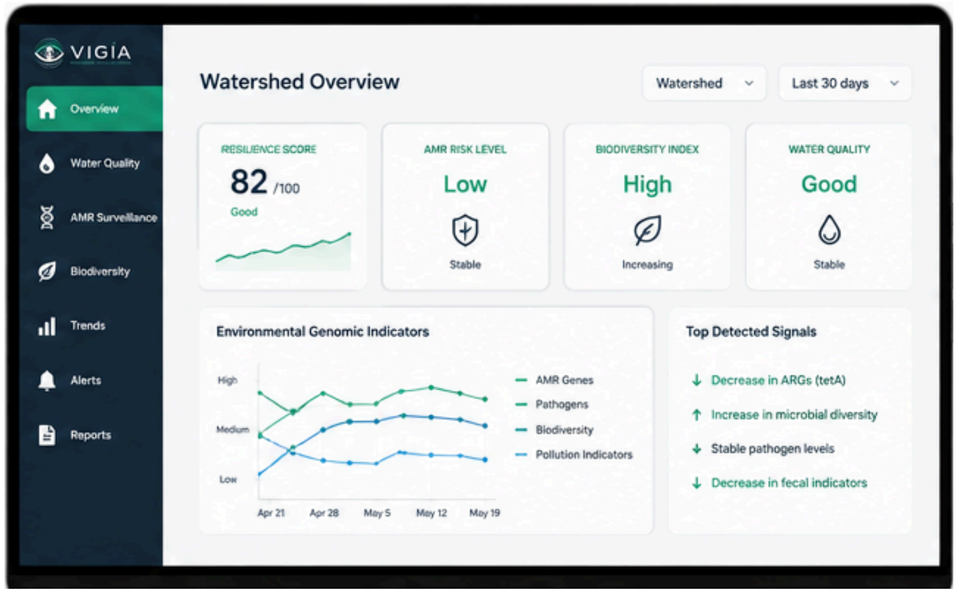

- Routine monitoring
- Molecular risk signal
- Risk profiling
- Likely source identified
- **Targeted action**

Up to 50% faster contamination source investigation

Product

The conventional monitoring system only gives you a snapshot. VIGÍA shows you the whole movie.

A **dashboard** that turns environmental DNA into **actionable information** for water treatment, anticipating climate-related risks, protecting operations, and building resilience

HOW IT WORKS

1 SAMPLE
Collects water samples from key points across the basin.

2 SEQUENCE
Analyzes environmental DNA through high-throughput sequencing.

3 ANALYZE
Transforms data into actionable environmental indicators.

4 ACT
Provides information, alerts, and recommendations to support informed decision-making.

Continuous monitoring
Tracking of bacterial communities and their genes

Ecosystem intelligence
Comprehensive watershed profile to explain events and act based on them

Cloud-based platform
Secure and easy-to-use dashboards

WHAT YOU GET

- Early warning of climate-related risks
- Integrated view of water quality, antimicrobial resistance, biodiversity, and ecosystem health
- Data-driven decisions for water and operational management
- Reports and dashboards customized to your needs

Customer Discovery

Initial assumptions

- The demand is **only** in private companies
- Interest **only** in regulatory compliance
- The value **ends** with treating water properly
- Monitoring is **only** used to detect the problem
- More data = more **value**

2 MARKET LEVELS VALIDATED

Local Market Access

SEDALIB S.A.

Operating local water utility

National Market Access

OTASS
ORGANISMO TÉCNICO DE LA ADMINISTRACIÓN DE LOS SERVICIOS DE SANEAMIENTO

National technical support and oversight for Water Utilities

Learnings

- The demand is **growing also in public** stakeholders
- 3 value drivers: compliance, **accountability** and **social responsibility**
- The value extends to **explaining** and **anticipating changes** in water sources
- Monitoring is moving toward a **circular economy**
- Value = **complex data** into **actionable information**

Interested buyers:

Agrokasa

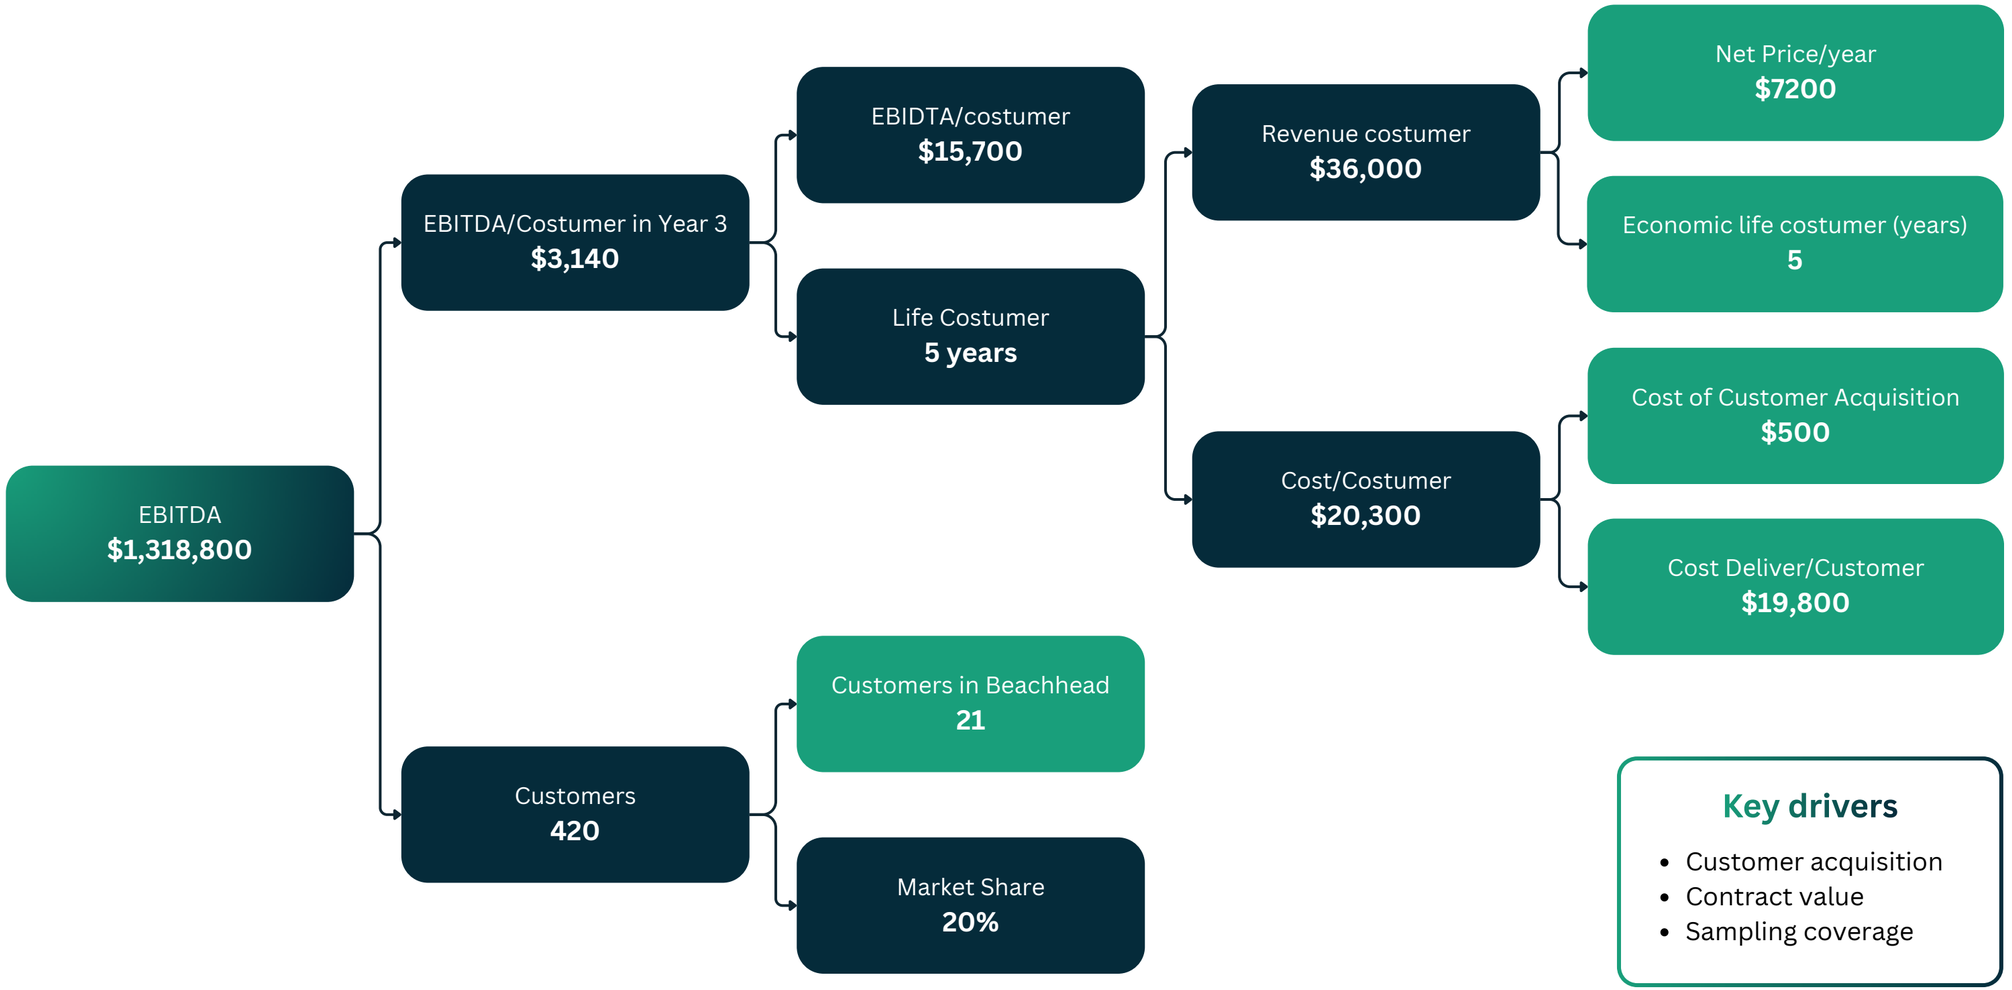

Emapica
EMPRESA MUNICIPAL DE AGUA POTABLE Y ALCANTARILLADO - ICA

Pedregal
the fruit company

Cerro Verde

MERESE
Mecanismos de Retribución por Servicios Ecosistémicos

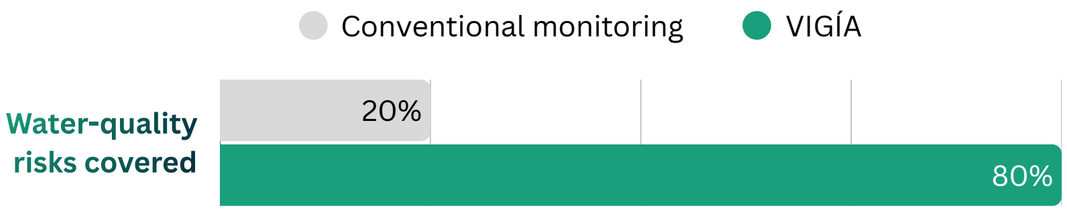

Financials

Key drivers

- Customer acquisition
- Contract value
- Sampling coverage

Climate Impact

VIGÍA's PROJECTED YEAR 3 IMPACT

2.4 million protected people

by enabling earlier detection and response to climate-sensitive water-quality risks

40,000 m^3/year
Safe drinking water

451,000 km^2
Protected watersheds
