GMoves

Coffee-wood stirrers that return to the farm

Virginia Aguilar & Luis Peñate · Finca San Vicente · San Marcos · Guatemala

THE BUSINESS MODEL

What's the deal?

COST / UNIT	PRICE / UNIT
$0.02	$0.04

We make and sell ***coffee stirrers with coffee wood***

Replacing plastic with sustainable wood

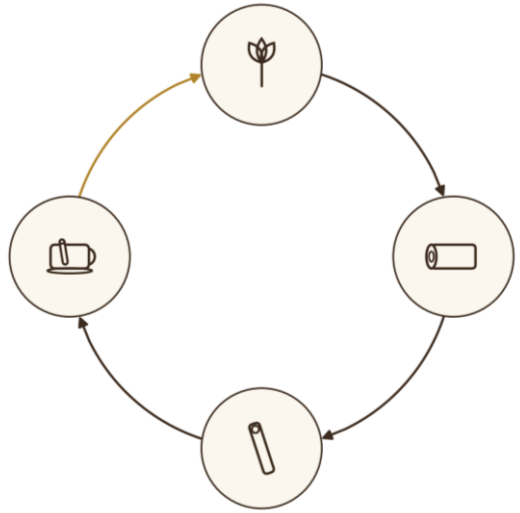

We accept them back after use

And compost them in farm

Our beachhead market is coffee shop chains.

GMoves promotes circularity and diversification in the coffee business

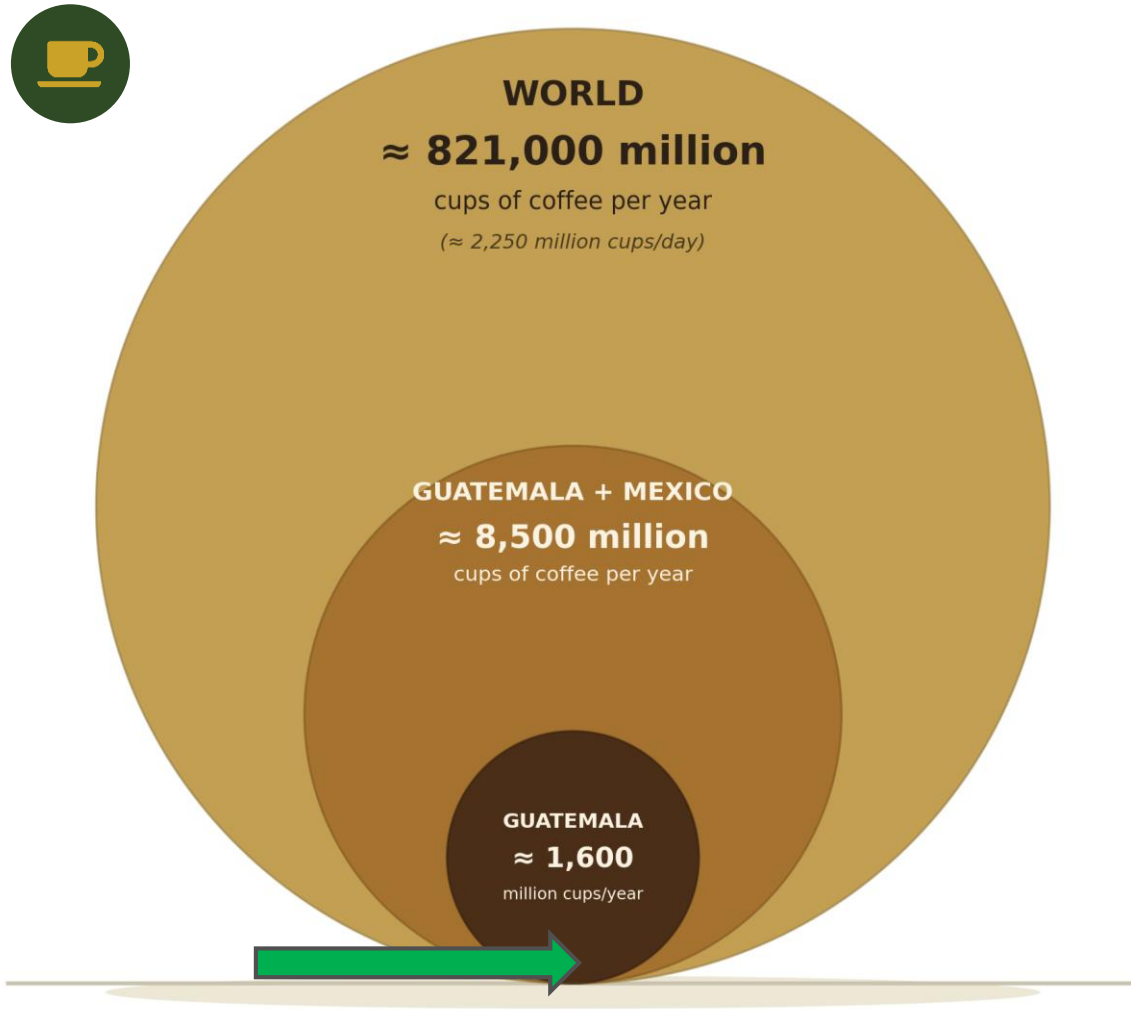

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

Coffee shop, chains

Chains concentrated in Central America

7.76% of Guatemalan served coffee market is enough to "*move*" the business

But
our commitment is not to export the product, but the business itself.

Customer and value proposition: 1, 2, 3 - ¡¡¡Actioooon!!!

1. Capitalize on social transformation – history value

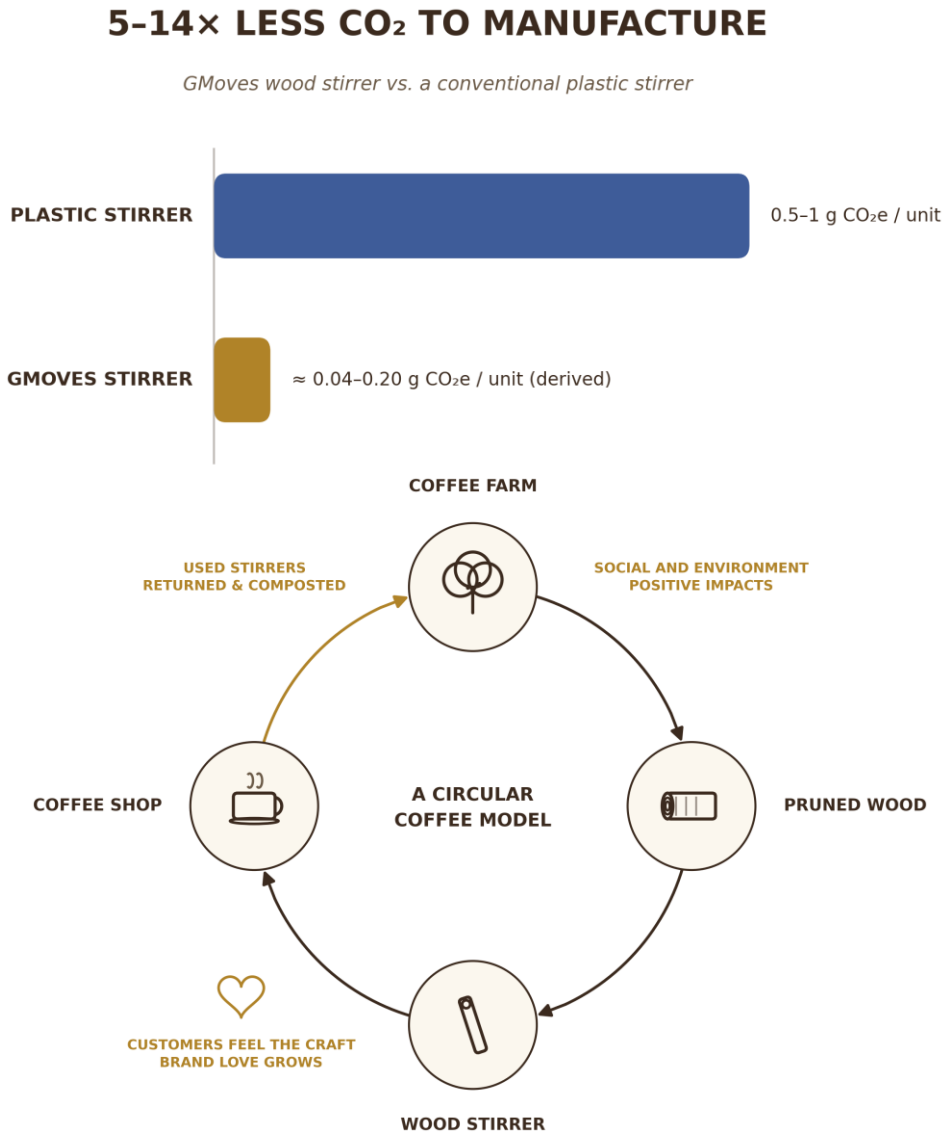

Coffee is culture; coffee enthusiasts understand what it reaches.

2. The service: what truly makes the difference

Aim to circular model.

3. Action: Everything counts for the care of the common home…

This product and service sells the opportunity to contribute

THE PRODUCT

Wooden stirrers and its return to farm

- The stirrers reduce plastic consumption and carbon footprint
- Market ready and one client business

- Origin, story – history 150+ years producing coffee
- We have the means
- Science based and labor-intensive process

VALIDATION

Customer discovery: what we learned

Over 20 interviews with industry people: independent coffee shops, chains and businesses that serve coffee, a specialized coffee taster, engineers, among others. 100 % consider the proposal a good idea and expressed interest in the product. ♥

Hypotheses

Do we have an opportunity if our cost is higher?
How many clients do we need?
What is our differentiator?

The take-back is the differentiator

Interest grows specifically around the idea of returning used stirrers for composting as a CSR strategy.

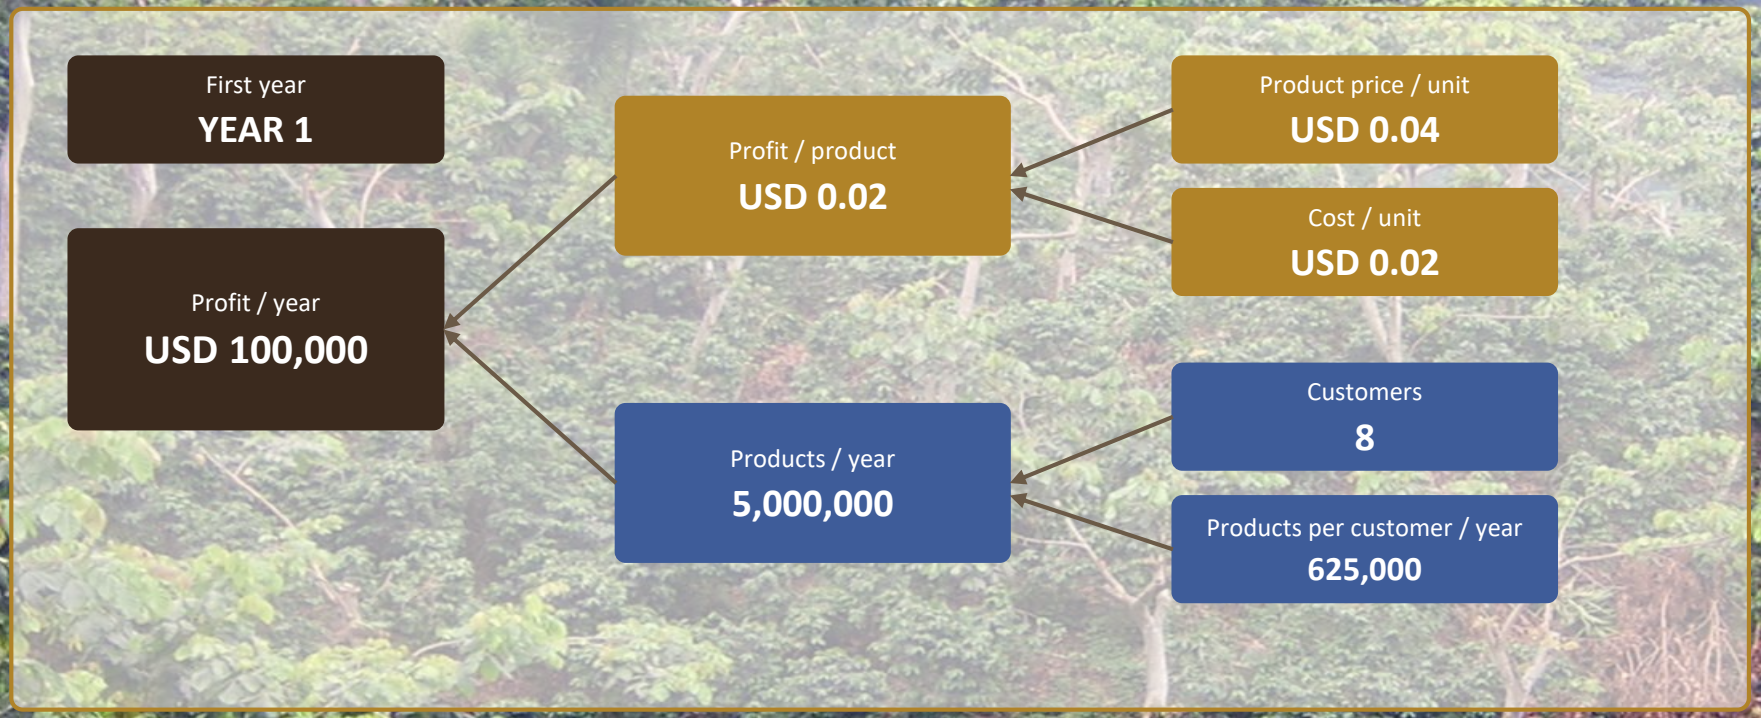

The origin story builds trust

The connection to a third-generation coffee farm resonates and lends credibility to the project… one client business.

Next validation pending

Still need to confirm willingness to buy, non elastic prices are a must.

Financials

Key Financial Drivers:

- Number of stirrers sold – 100% of raw material available.
- Decreasing unit cost can occur but there may be hidden or unforeseen costs.
- Number of coffee-shop customers – one client may be sufficient.
- Non elastic price is “the key”.

Environmental effect on the beachhead market

Replacement of
20,000
plastic stirrers/day

21 - 47

Tons of CO2 avoided/year vs. the conventional plastic stirrer scenario/year

-

Great potential of growth
(linear minimum)

GMoves

20,000 PLASTIC STIRRERS REPLACED, EVERY DAY

~5 kg PER DAY → **~1.8 t** PER YEAR

5 to 14 times less CO2 than plastic single use - 5 seconds stirrers – 600 years to break down (models)

IPCC, 2006

80% of marine litter is single-use plastic

Greenpeace Spain, 2017

We and our dream

"Our dream is for GMoves to become the benchmark of circular economy across the global coffee supply chain, generating decent jobs and positive environmental impact"

"Being fair… we think that if life gives us wood, we should make stirrers…"
