Nexus ecosystem wire map

Internal review · solid = live · dashed = planned · max detail in key table

Numbered wire key

#	Wire label	Meaning	Status
1	sanitize / ingest	build_public_data.py from Canva + policy research into static/ecosystem/data	live
2	load bundle	ecosystem.mjs fetches actors, relations, policies, policy_relations, story-chapters	live
3	chapter config	story-chapters.json drives D5 rail (target order shown in orange column)	live config; reorder planned
4	filter edges	story.mjs filters relations per chapter; partnerships add Suggested dashed edges	live
5	deep link	Hubs story chapter → HubMap /hubs/{slug}/	planned
6	card_slug	Actor inspector → /s/{slug} when nexus.card_slug set	live UI; sparse data
7	startup page	One-pagers link to Wiki Idea Browser where published	live
8	actor page	Wiki book 3042 actor profiles (private review → public)	planned
9	related	Challenge → policies, ideas, solutions, startups, actors in inspector	planned
10	same country	policy_relations only connect actors within PE, CO, or SV	live rule
11	static	Promote cth-nexus main to VPS (apply_live.sh deliberate)	live process
