- Energy

Market

2030 ~120 paying customers only in Colombia

SOM **USD $300K**

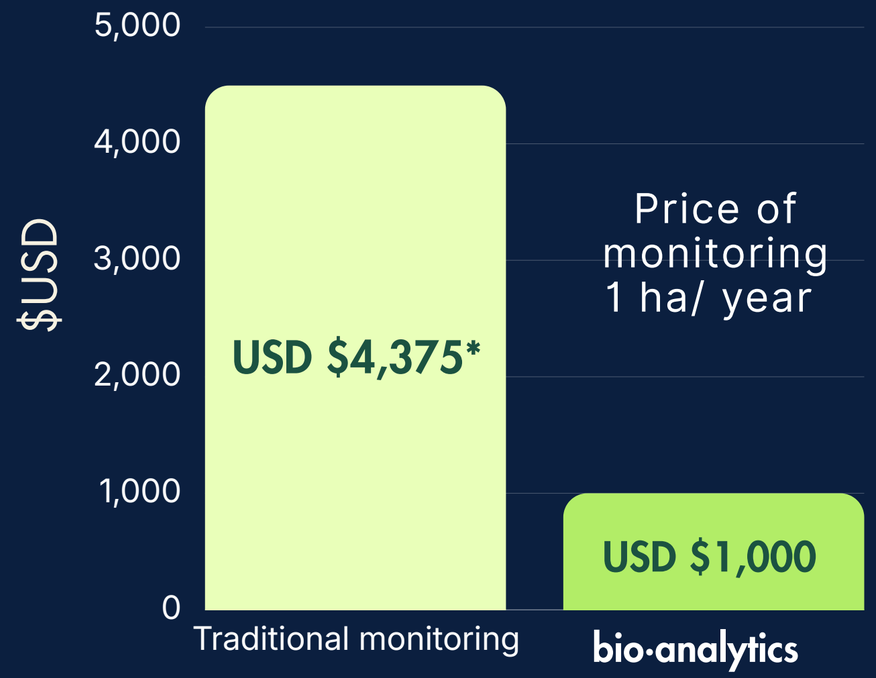

Qualified organizations able to adopt continuous non-invasive biodiversity monitoring

SAM **USD $5M**

Colombian organizations and projects with land-based biodiversity exposure

TAM **USD $12.5M**

Customer Value Proposition

Continuous monitoring, not a snapshot

Fewer field visits

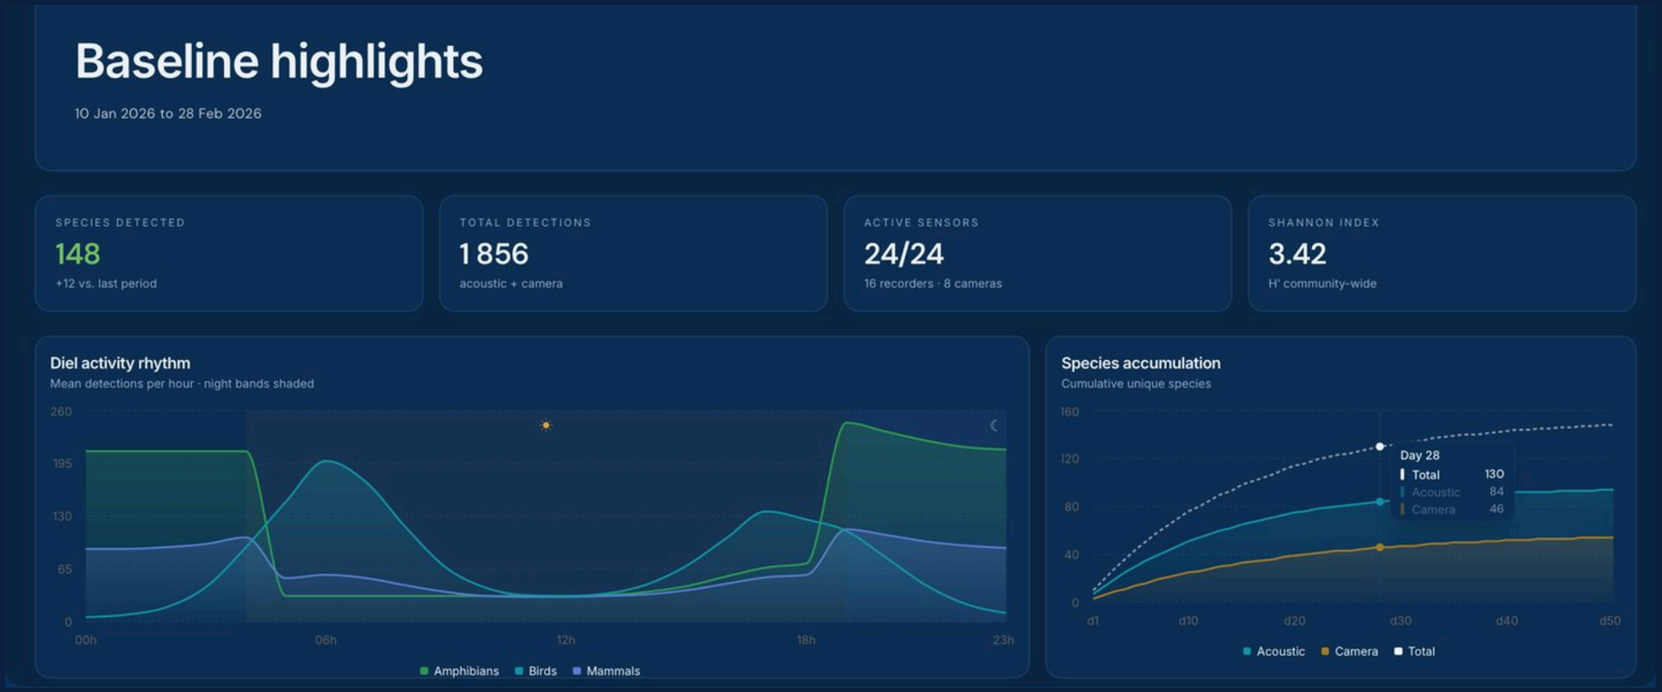

No animal capture

Standardized methodology

Traceable and reproducible

*One-year bird-monitoring campaign with four 7-day field visits and reports. Includes only the field biologist's labour (Colombia's 2026 minimum-wage employment and professional quotaions) and equipment rental (Bioweb SAS prices).

Product : bio·analytics platform

Continuous, traceable and **scalable** monitoring

Insect detection

Expert validation

Easy to use and understand

bio·indicators: species that reflect the ecosystem's health

Customer Discovery

Previous assumptions

Growing demand mostly in **regulated markets**

Organizations only invest in biodiversity monitoring when **mandatory**

Customers value **precise** data reporting

Learnings

Growing demand also in **voluntary markets**

Biodiversity monitoring creates value, organizations invest in biodiversity **voluntarily**

Customers value **intuitive** data reporting

Financials

EBIDTA IN YEAR 3

Key drivers

Price sensor/year = $1000 usd
Sensor/customer = 8*
Customers/share = 12 customers x 1.2%*

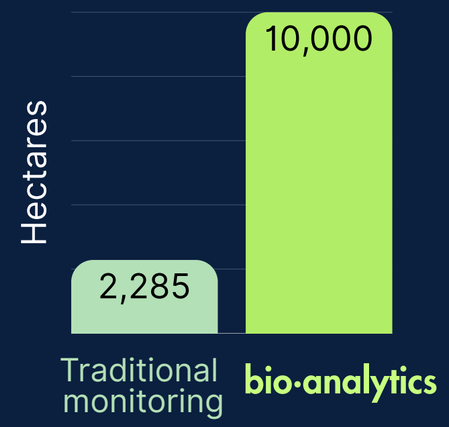

*Assumption

Climate impact

Nature and biodiversity based solutions

Direct impact

Hectares under biodiversity monitoring with $10M*

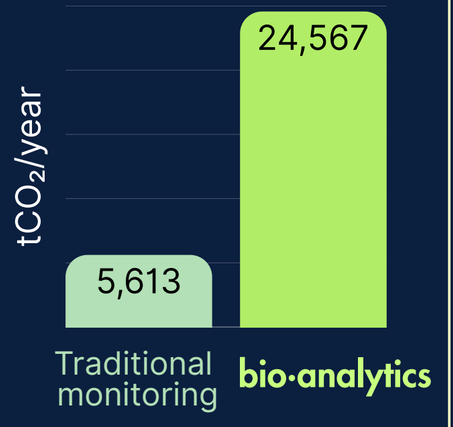

bio·analytics as biodiversity "health thermometer"

Indirect impact

Estimated annual carbon uptake in hectares under biodiversity monitoring**

social impact

Green jobs

Community data soberanity

*One-year bird-monitoring campaign with four 7-day field visits and reports. Includes only the field biologist's labour (Colombia's 2026 minimum-wage employment and professional quotaions) and equipment rental (Bioweb prices). Estimated area (in hectares) protected through funds invested in monitoring in Colombia

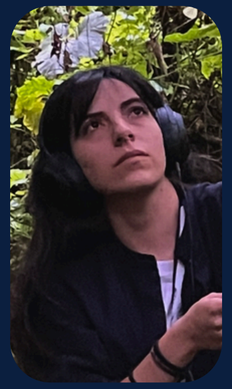

**Estimate: area × 2.46 tCO_2/ha/year, based on mature Andean forests (Duque et al., 2021)

Our dreams

Make biodiversity conservation profitable for worldwide companies of all sectors

Position Colombia as the **global biodiversity services hub**

Added-value will allow us to create **meaningful jobs for young talent** in our country
